Department of Civil Engineering and Construction

The baccalaureate program in civil engineering is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology. The department offers undergraduate programs in both civil engineering (B.S.C.E.) and construction (B.S.C.).

Facilities The curriculum is supported by 14 cutting-edge laboratory and computer facilities equipped with modern hardware and software. Laboratories include multimedia, ArchiCad modeling, simulation, emerging technologies, fluid mechanics/hydraulics, surveying, concrete design, asphalt pavement design, construction, structural, geotechnical, estimating, design projects, machine shop, and research. The department has four computer laboratories, three using PCs and the fourth Macintosh G4's. The computers have a wide range of software, including multimedia software such as Authorware and Toolbook, Autocad 2000, Photoshop, Dreamweaver, Fireworks, SAP 2000, Working Model (a simulation program), word processing, spreadsheets, Powerpoint, database management programs, etc. The computer facilities are available to CEC students on a 24-hour basis.

Internationalization and the Global Explorer Program The Global Explorer Program is designed to expand the professional capabilities, stimulate intellectual growth, and broaden the personal perspective of all participants. Arrangements have been made with universities around the world to send our students overseas either for short courses, a semester, or an entire year. The department is committed to giving all of our students the opportunity to study overseas. Students with financial need have received financial support that enables them to study abroad for equal to or less than what it would cost to study on campus. Financial aid is available to students choosing to study for a semester or a year overseas at another institution. Since 1995, close to 250 students have studied overseas. Each year, more than 30 students go to England, Denmark, and Egypt to study under the guidance of CEC faculty.

Scholarships Currently 40 annual and endowed scholarships are available to students.

Placement For the past eight years CEC graduates have had a 100% placement, with starting salaries that are very competitive nationwide. Employers perceive our students as having the capability to “hit the ground running” with a minimum amount of supervision.

Leadership A focus of the department is the development of leadership skills in our students. Students are encouraged to participate in student professional organizations and academic honorary organizations by being officers or committee chairs. Leadership skills are also developed through service and outreach programs that teach good citizenship. Our students have designed and built playgrounds and running tracks and have done work for Women’s Strength, and the South Side Mission. Many of our students, both in civil engineering and construction, participate in the outstanding “Bridge Pal” program designed to foster an interest in engineering by high school and grade school students.

Faculty Qualifications The faculty have published more textbooks than any other civil engineering or construction department of a similar size in the United States. These textbooks are used at a large number of highly regarded institutions. CEC faculty have received numerous awards for teaching excellence and scholarship, as well as for their professional contributions. They have conducted research for national, state, and local sponsors,
benefitting society and our students.

**Graduation** To graduate, students must meet
all university and college graduation requirements. Additionally, CEC students must achieve a minimum GPA
of 2.25 in civil engineering courses to graduate.

**Graduate Program** In addition to the undergraduate
program described above, the Department offers a
graduate program leading to the Master of Science
in Civil Engineering degree. Details of this program may be
found in the Graduate Catalog. The graduate program
allows talented undergraduate students to engage in
scholarly research activities and to enroll in advanced
courses to meet their special interests and needs.

**Civil Engineering**
The Department of Civil Engineering and Construction
offers an ABET-accredited BSCE program that provides
students the necessary background for continued
professional growth and prepares them for engineering
careers. The program offers a broad spectrum of
specialties including structures, water resources,
environmental engineering, transportation, highway
and pavement design, geotechnical engineering, and
construction management. The curriculum is designed to
give students the broad technical background required
for modern civil engineering practice and/or to pursue
higher education. Students are trained to be leaders who
understand their critical roles in the development and
maintenance of society's infrastructure.

The program is founded on a strong core in
mathematics as well as natural and engineering sciences.
Design practices in civil engineering are integrated
throughout the curriculum, culminating in a capstone
design course under the supervision of well-qualified
faculty and industrial partners. A sequence of courses
in the humanities and social sciences helps students
understand the impact of engineering solutions on
society. The courses selected in the humanities and social
sciences are chosen to provide both breadth and depth
and meet university general education requirements. An
approved list of courses that satisfy these requirements
may be obtained from the student's academic advisor. The
curriculum gives students as much flexibility in technical
electives as possible while meeting all accreditation
requirements. The student may select either the civil
engineering program or the civil engineering program
with the environmental engineering option. Typical four-
year curricula are given for both programs.

**Total Hours** 129

---

1 General education courses may be selected from an approved list for each category. They may be taken in any sequence, not necessarily in the semester indicated. The general education sequence must reflect depth of study; see your academic advisor for an approved list. Other University general education requirements are satisfied by specific courses required above.

2 Technical electives must be chosen from an approved list. See "Technical Electives."
Civil Engineering Technical Electives

18 credit hours

All electives selected by the student should be approved by the student’s academic advisor. The student should select his/her technical electives to reflect career objectives.

Students wishing to enroll in a CE graduate-level course must have a minimum 2.5 GPA in CE courses.

1. Basic Science
   Students may apply up to a maximum of 9 semester hours but not less than 3 semester hours from the following courses:
   - Any physics course above 200
   - Any biology course
   - Any chemistry course above CHM 116
   - Any geological science course above 101

2. Engineering Science
   Students may apply up to a maximum of 9 semester hours but must take IME 301, EE 327, or ME 301.
   - ME 301 Thermodynamics I
   - ME 302 Thermodynamics II
   - ME 521 Intermediate Fluid
   - ME 556 Mechanics of Composite Materials
   - ME 577 Finite Element Methods in Engineering
   - IME 301 Engineering Economy I
   - IME 313 Operations Research I
   - EE 205 Fundamentals of Circuit Analysis
   - EE 327 Fundamentals of Electrical Engineering I
   - EE 328 Fundamentals of Electrical Engineering II

3. Civil Engineering
   Students must select a minimum of 6 semester hours.

   Group A: Civil Engineering Science Courses
   Students may apply up to a maximum of 9 semester hours.
   - CE 465 Surface Water Hydrology
   - CE 508 Advanced Soil Mechanics
   - CE 510 Advanced Numerical Methods
   - CE 541 Transport Phenomena in Environmental Systems
   - CE 544 Advanced Hydraulics
   - CE 546 Groundwater Hydrology and Hydraulics
   - CE 555 Environmental Regulations and Policy
   - CE 560 Advanced Structural Analysis
   - CE 573 Advanced Mechanics of Materials
   - CE 575 Structural Dynamics
   - CE 591 Special Topics I
   - CE 592 Special Topics II

   Group B: Civil Engineering Design
   Students may apply up to a maximum of 12 semester hours and not less than 3 semester hours.
   - CE 422 Foundation Analysis and Design
   - CE 430 Water Supply and Hydraulic Engineering
   - CE 515 Advanced Foundation Engineering
   - CE 542 Physiochemical Process Design
   - CE 543 Biological Process Design
   - CE 550 Geoenvironmental Engineering
   - CE 562 Advanced Steel Design
   - CE 565 Advanced Concrete Design
   - CE 567 Prestressed Concrete
   - CE 591 Special Topics I
   - CE 592 Special Topics II

4. Mathematics, Business, and Computer Science
   Students may apply up to a maximum of 6 semester hours.
   - Any mathematics course above MTH 224
   - Any business, accounting, marketing or economics course.
   - Any computer science course above CS 202

5. Other
   Students may apply up to a maximum of 6 semester hours.
   - CE 491 Special Topics I
   - CE 492 Special Topics II
   - CE 522 Advanced CADD
   - CE 524 Multimedia Applications in CEC
   - CE 526 Advanced Cost Estimating for Construction Projects
   - CE 528 Advanced Scheduling
   - CE 529 Construction Contract Administration
   - CE 536 TQM Principles in Construction
   - CE 537 Simulation in CEC
   - CON 356 Construction Industry Safety Practices
   - CON 390 Microcomputers in Construction
   - CON 392 Construction Management
   - CON 394 Construction Labor and Unions
   - CON 395 Construction Claims and Change Orders
   - CON 489 Alternate Material Structures
   - CON 492 Construction Contracts
   - CON 494 Advanced Construction

Civil Engineering with Environmental Engineering Option

The Peterson’s Guide states that environmental engineering involves the engineering control of activities, processes, and systems that affect the environment—adversely or favorably. Primary emphasis is on the scientific and engineering development, design, and operation of water resource quality management systems involving agricultural, industrial, and municipal water supply treatment; wastewater treatment; solid waste disposal; remediation of contaminated sites; and reclamation (recycling). Also considered are gaseous and solid waste analyses and the design and management of process control systems.

The field of environmental engineering has undergone significant growth over the past decade, a documented trend that is expected to continue well into the 21st century. This growth has brought with it a need for trained personnel to address existing environmental concerns and prevent future problems.

The Congressional Office of Technology Assessment has stated that, nationwide, the demand for professionals trained in the area of hazardous waste cleanup alone grew from 5,000 in 1985 to 11,500 in 1990, and was expected to double again by 1995. The overall demand is estimated to be as many as 5,000 new environmental engineers per year, but only one-third are currently being supplied by educational programs.
Environmental Engineering Concentration Technical Electives

1. All electives selected by the student should be approved by the student’s academic advisor. It is important for the student to be aware of prerequisites when selecting electives. The student should plan his/her technical elective selections with his/her academic advisor during his/her junior year.

2. Engineering Science Elective-Fall Semester of Junior Year

The student shall select one of the following three courses.

a. ME 301 Thermodynamics
b. EE 327 Fundamentals of Electrical Engineering I or EE 205 Fundamentals of Circuit Analysis
c. IME 301 Engineering Economics

3. Environmental Science Elective-Spring Semester of Junior Year

The student shall select one environmental science course from the listing of basic science electives listed below.

a. BIO 300 Population, Resources and the Environment
b. BIO 395 General Microbiology
c. BIO 460 Ecology
d. CHM 250 Organic Chemistry
e. GES 150 Principles of Engineering Geology
f. GES 312 Structural Geology and Tectonics
g. GES 410 Principles of Geochemistry
h. GES 461 Introductory Geophysics

4. All technical electives should be selected from the approved listing. The approved listing is designed such that the student may select their technical electives to develop a geoenvironmental or an environmental engineering management focus. The student may also select their technical electives from both areas. The student must select their technical electives such that they accumulate 3 semester hours of design. A listing of the approved technical electives follows on the next page.

Environmental Engineering Electives

Geoenvironmental Focus

GES 450* Hydrogeology
CE 508 Advanced Soil Mechanics
CE 510 Advanced Numerical Methods
CE 544 Advanced Hydraulics
CE 546 Groundwater Hydrology and Hydraulics
CE 555 Environmental Regulations and Policy
CE 591 Special Topics I
CE 592 Special Topics II

Environmental Engineering Management Focus

GES 450* Hydrogeology
CE 510 Advanced Numerical Methods
Course Descriptions

CE 100 Introduction to Civil Engineering 1 hr.
Introduction to the civil engineering and environmental engineering professions. Introduction to fundamental engineering concepts; engineering design; engineering ethics; professional societies; introductions to computers and computer applications. Cross-listed as CON 100. Prerequisites: freshman standing or consent of instructor.

CE 124 Emerging Technologies in CEC 2 hrs.
Examination of emerging computer technologies and their relevancy to Civil Engineering and Construction. Introduction to common software including spreadsheet, word processing, databases, graphics and presentation. Exposure to multimedia tools such as text, image, sound video and animation. Introduction to E-mail and Web page development. Cross-listed as CON 124.

CE 150 Mechanics I 3 hrs.
Analysis of two- and three-dimensional force systems by vector algebra. Application of principles of equilibrium to particles, rigid bodies, and simple structures. Friction, distributed forces, center of gravity, centroids, moments of inertia. British and metric systems of units and applications. Prerequisite: C or better in MTH 121. Corequisite: MTH 122.

CE 191, 192 Special Topics 1-3 hrs. each
Topics of special interest which may vary each time course is offered. Topics stated in current Schedule of Classes. If taken to satisfy one of the technical electives, applies only to the ABET “other” category. Prerequisite: freshman standing.

CE 200 Engineering Co-op 0 hrs.
Full-time cooperative education assignment for civil engineering students who alternate periods of full-time school with periods of full-time academic or career-related work in industry. Satisfactory/Unsatisfactory. Prerequisites: Sophomore standing in the College of Engineering and Technology, 2.0 overall grade point average at Bradley, approval of engineering and technology Co-op coordinator and Co-op faculty advisor.

State-of-the-art algorithms used in solving complex engineering problems. Mathematical models involving ordinary and partial differential equations. Initial value, boundary value, and transient problems in civil engineering. Prerequisite: MTH 223.

CE 206 Surveying 2 hrs.
Theory and applications of measurements of horizontal distances, differences in elevations, horizontal angles, vertical angles, bearings, azimuths, and plane area. Simple horizontal circular curves, topographic surveys and mapping. Prerequisite: CON 132.

CE 224 CADD in Civil Engineering 3 hrs.
Examinations of the graphical capabilities of current computer aided design and drafting (CADD) systems. Theoretical and hands-on applications of the most widely used CADD systems available for civil engineering applications. Cross listed as CON 224.

CE 250 Mechanics II 3 hrs.
Kinematics and kinetics of particles and rigid bodies using vector analysis. Kinetics includes principles of force-mass-acceleration, work-energy, and impulse-momentum. Prerequisite: C or better in CE 150. Corequisite: MTH 223.

CE 301 Mechanics of Materials 3 hrs.
Internal forces; stress, strain, and their relations; stresses and deformations in axial and torsional loading; indeterminate problems; stresses and deformations in flexural members; transformation of stresses; introduction to member design; column buckling analysis. Prerequisite: C or better in CE 150 or equivalent.

CE 303 Structural Materials Laboratory 2 hrs.
Experimental study of mechanical properties of steel and concrete. Tensile, compressive, and flexural behavior of steel. Concrete mix design, brittleness, and microstructure. Mechanical properties of timber. Prerequisite: CE 301 or concurrent enrollment.

CE 304 Fluid Mechanics 3 hrs.
Fluid properties and fluid motion: basic laws of fluid motion in integral form; applications of basic laws in solving fluid flow problems. Hydrostatics, dimensional analysis, similitude, and incompressible viscous flow (both laminar and turbulent) in conduits. Introduction to open channel flow. Laboratory experiments to demonstrate theory and flow measurement in conduits and open channels. Prerequisite: C or better in CE 250; MTH 223.

CE 308 Geotechnical Engineering 4 hrs.
Physical properties of soils, soil profiles, and deposits. Soil strength determination. Flow of water through soil masses. Prerequisite: CE 301; CE 304 or concurrent enrollment.

CE 310 Probability, Statistics and Decision Making in Civil Engineering 3 hrs.
Basic probabilistic and statistical decision principles used in civil engineering design and practice. Probabilistic models and decision theory. Corequisite, MTH 224.

CE 320 Introductory Soil Mechanics 3 hrs.
Introduction to soil mechanics and foundation construction for non-CE majors. Soil index properties, classification, stress analysis, soil compaction, dewatering, excavations and foundation construction. Prerequisites: IMT 324 or CE 301; construction major.

CE 356 Pavement Design 3 hrs.
Pavement engineering and design. Selection testing, and use of highway pavement construction materials in relation to function, environment and cost. Structural properties of asphalt concrete; laboratory experiments. Prerequisites: CE 303, CE 308 or CE 320.

CE 359 Structural Analysis 4 hrs.

2005-2006 UNDERGRADUATE CATALOG
CE 360 Introduction to Environmental Engineering 4 hrs.
Analysis techniques and design procedures for unit operations and unit processes of water and waste water treatment. Techniques for examination of water and waste water quality. Corequisite: CHM 112.

CE 401 Seminar 1 hr.
Papers, reviews, and discussion of current technical literature. Prerequisite: senior standing in civil engineering.

CE 403 Reinforced Concrete Design 3 hrs.

CE 422 Foundation Analysis and Design 3 hrs.
Analysis and design of footings, raft foundations, retaining walls, piles, and caissons, based on current theories and design considerations in soil mechanics, concrete, and steel. Prerequisites: CE 308, 403.

CE 430 Water Supply and Hydraulic Engineering 3 hrs.
Water use and wastewater generation. Conveying and distributing water. Wastewater and stormwater conveyance system design. Design of storage structures and other systems for water conservation and water use; open channel flow, closed conduit flow, hydraulic structures, hydraulic power conversion. Prerequisite: CE 304.

CE 442 Design of Steel Structures 3 hrs.
Design of metal structural members. Behavior of members and connections. Theoretical and practical considerations in member selection and joint design. Prerequisite: CE 359.

CE 465 Surface Water Hydrology 3 hrs.
Introduction to hydrological cycle. Hydrologic measurements and monitoring. Surface water hydrology: runoff and the catchment, hydrographs, unit hydrographs, hydrograph routing, urban and small watershed hydrology, hydrologic design, synthetic streamflows, simulation models, applications of probability and statistics to surface water hydrology. Prerequisites: CE 304, CE 310 or consent of instructor.

CE 491, 492 Special Topics 1-3 hrs. each
Topics of special interest which may vary each time course is offered. Topics stated in current Schedule of Classes. If taken to satisfy one of the technical electives, applies only to the ABET “other” category. Prerequisite: senior standing.

CE 498 Civil Engineering Design Project 3 hrs.
With faculty aid, students select a design project, plan its solution including the management of the project and perform the actual design as a member of a team. Oral and written report of final design with specifications, engineering drawings, and engineering cost estimate as well as an assessment of the impact on the environment. Prerequisites: senior standing; consent of department chair.

CE 499 Advanced Multimedia Authoring in Engineering 2 hrs.
Multimedia authoring review, web authoring, 3D animation, video capturing and manipulation, anatomy of a multimedia design document, application packaging and distribution. Students will apply the learned topics to develop an integrated engineering application based on their discipline. Prerequisites: CE 224, 399.

CE 508 Advanced Soil Mechanics 3 hrs.
Consolidation theory and settlements, stress-path method, strength and deformation behavior of soils, failure theories, confined flow, flow nets, numerical analysis of flow, unconfined flow, seepage through earth dams. Laboratory experiments on consolidation and shear strength. Prerequisites: CE 308.

CE 510 Advanced Numerical Methods with Engineering Applications 3 hrs.
Selected numerical methods and applications chosen to meet current needs for solving problems in civil engineering. Prerequisite: CE 202 or equivalent.

CE 515 Advanced Foundation Engineering 3 hrs.

CE 522 Advanced CADD 3 hrs.
Applications of CAD systems. Visualization and optimization of the processes used in construction through three-dimensional modeling and utilization in various civil engineering and construction applications. Prerequisite: CE 244 or CON 224 or consent of department chair.

CE 524 Multimedia Applications in Civil Engineering and Construction 3 hrs.
Application of state-of-the-art technology in projects during various phases from inception to completion including planning, design, procurement, construction, handing over, and operation and maintenance. Investigation of different available tools and technologies in recording, storing, and sharing project information. Prerequisite: senior or graduate standing in the College of Engineering and Technology.

Advanced techniques in taking-off quantities, pricing techniques, computer estimating, and bidding strategy models. Prerequisite: CON 396.

CE 528 Advanced Scheduling 3 hrs.
Project scheduling methods with emphasis on network scheduling techniques, work breakdown structure (WBS), resource and cost loading, scheduling under uncertainties, project time compression, resource leveling, scheduling for linear projects (LOB), time-cost trade-offs, project status, reporting and updating, schedules as tools for claims documentation. Case studies. Computer based. Prerequisite: CON 392.

CE 529 Construction Contract Administration 3 hrs.
Issues in the administration and implementation of a construction contract. Coordinating and controlling the construction project under legal and ethical considerations. Prerequisites: CON 492.

CE 536 TQM Principles in Construction 3 hrs.
Theory and analysis of the Total Quality Management system as applied within the construction industry. Case studies. Prerequisite: QM 262 or IME 311.

CE 537 Simulation in Construction 3 hrs.
Decision making using simulation and simulation languages to model construction operations. Simulation of construction process using what-if analysis. Role of simulation and decision making in the planning and scheduling phases in the construction industry. Topics
include introduction to discrete event simulation, generation of random numbers, queuing, simulation languages for construction. Prerequisites: senior or graduate standing; consent of instructor.

CE 541 Transport Phenomena in Environmental Systems 3 hrs.
Phenomena that affect mass balance of contaminants in environmental systems. Advection, dispersion, diffusion, and interfacial mass transfer. Physical, chemical, and biological descriptions of these processes with mathematical models. Solutions to these models with illustrations from reactor engineering and surface water quality modeling. Application to actual process reactor. Prerequisites: senior or graduate standing; consent of instructor.

CE 542 Physiochemical Processes Design 3 hrs.
Design of physical and chemical unit processes and unit operations with an emphasis on water treatment. Design of aeration systems, coagulation and flocculation processes, sedimentation tanks, filtration systems, chemical precipitation processes, ion exchange processes, and disinfection processes. Advanced purification methods including adsorption, reverse osmosis, electro-dialysis, and membrane processes. Treatment and disposal of physiochemical process sludges. Prerequisite: CE 360.

CE 543 Biological Processes Design 3 hrs.
Application of concepts from microbiology and biology to environmental engineering systems. Detailed integrated design of wastewater treatment. Microbiology of wastewater treatment processes and soil bioremediation processes. Interaction between biogeochemical phenomena and microbial processes in an environmental engineering context. Prerequisite: CE 360.

CE 544 Advanced Hydraulics 3 hrs.
Steady state closed conduit flow; flow in pipe networks. Hydraulic transients in pipelines. Open channel flow; gradually varied, spatially varied, rapidly varied flow in open channels; open channel transients. Water and wastewater treatment plant hydraulics. Sedimentation mechanics, sediment transport, design of unlined channels, bridge scour, reservoir sedimentation. Design and computer applications. Prerequisite: CE 430.

CE 546 Groundwater Hydrology and Hydraulics 3 hrs.
Groundwater in the hydrological cycle, fundamentals of groundwater flow; flow net analysis; steady-state and transient well testing techniques for parameter estimation; multiple well systems; leaky aquifers; sea water intrusion; groundwater investigation; artificial recharge of aquifers, design of wells; subsidence and lateral movement of land surface due to groundwater pumping. Design and computer applications. Cross listed as GES 546. Prerequisites: CE 202, 304, or consent of instructor.

CE 550 Geoenvironmental Engineering 3 hrs.

CE 555 Environmental Regulations and Policy 3 hrs.
Description and analyses of environmental regulations and policies for air, water, groundwater, and solid wastes. Conventional and hazardous wastes. Toxicological, risk assessment, and regulatory aspects of solid and hazardous waste management; characterization of hazardous wastes and materials; waste reduction strategies; collection, storage, and transportation methods. Environmental impact statements. Prerequisite: CE 360.

CE 560 Advanced Structural Analysis 3 hrs.
Direct stiffness method for the analysis of two-dimensional trusses and frames, equivalent nodal forces, thermal and settlement effects, principle of virtual work, space trusses, grid structures, static condensation, Lagrange multipliers, tapered elements. Prerequisites: CE 202, CE 359.

CE 562 Advanced Steel Design 3 hrs.
Structural framing systems; rigid frame design; design of bracing; design of simple rigid and moment resisting connections; torsion of steel open sections; design of beams subjected to torsion; design of steel plate girders; design of composite beams. Prerequisite: CE 442.

CE 565 Advanced Reinforced Concrete 3 hrs.
Advanced topics in flexural design; torsion in beams; behavior and design of slender columns; biaxial bending of columns; design of two-way slabs; behavior and design of frame-wall structural systems; inelastic analysis of flexural members; use of strut and tie analysis; yield line analysis; design of mat foundations. Prerequisite: CE 403.

CE 567 Precast Concrete 3 hrs.
Theory and analysis of precast concrete members by various methods of prestressing; design of simple and continuous beams and slabs; prestress losses; composite beams. Extensive study of materials used in precast concrete. Precast concrete systems. Prerequisites: CE 403; senior or graduate standing.

CE 573 Advanced Mechanics of Materials 3 hrs.
Two- and three-dimensional stress and strain at a point; two-dimensional elasticity; beams on elastic foundations; torsion of noncircular sections; curved beams; unsymmetrical bending; plastic collapse and limit analysis. Prerequisites: CE 301; senior or graduate standing.

CE 577 Structural Dynamics 3 hrs.
Single degree of freedom systems; multi-degree of freedom systems; lumped mass and consistent mass—MDOF beams; free and forced vibrations; earthquake loading; impact and impulsive loads; numerical procedures. Prerequisites: CE 202, CE 359.

CE 591 Special Topics I 1-3 hrs.
Topics of special interest, which may vary each time course is offered. Topic stated in current Schedule of Classes. Prerequisite: senior or graduate standing.

CE 592 Special Topics II 1-3 hrs.
Topics of special interest, which may vary each time course is offered. Topic stated in current Schedule of Classes. Prerequisite: senior or graduate standing.
Construction

The construction industry is large, varied, and complex. It is intimately interwoven with, and exerts significant influence on, the overall economy of our nation. Constructors — the modern construction professionals — are educated in engineering and architectural principles in the building process, allowing effective communication with the many persons with whom contact is necessary: the design professionals (engineers and architects), specialty subcontractors, manufacturers and distributors of construction materials and products, financiers and others. Additionally, and most importantly, the constructor is a manager. The constructor's education must include the essentials of contemporary management philosophy, sound business and construction practice, and enlightened human relations. This multidisciplinary curriculum has been developed from these aims which are in consonance with the goals of the Associated Schools of Construction, and with the philosophy of the American Institute of Constructors.

The program described below was developed for the typical student interested in general preparation for a construction career. A minor in business administration or management is possible by careful selection of electives and a total of 131 semester hours.

The Bachelor of Science in Construction (BSC) degree requires a minimum of 126 approved semester hours. (Courses taken to remove deficiencies, e.g., MTH 100, 109, 110, 112, and PHY 100, must be taken in addition to the approved 126 semester hours.)

Degree Requirements

Accreditation criteria are met by the following groups of courses:

Group I — General Education
1 ENG 101 English Composition .................. 3
2 ENG 300, 301, 304, 305, or 306 Advanced Writing .. 3
3 COM 103 Oral Communication Process .......... 3
4 Western Civilization ................................ 3
5 Non-Western Civilization ........................... 3
6 Human Values ....................................... 3
7 Fine Arts ............................................. 3

21

Group II — Mathematics and Science
1 MTH 115 or 121 Calculus I .......................... 4
2 MTH 116 or 122 Calculus II ......................... 4
3 PHY 107 or 110 Physics I ............................ 4
4 Computer Programming Elective ................... 4
5 GES 101, 102 Principles of Earth Science ......... 4

18-19

Group III — Business Management
1 ECO 221 Microeconomics .......................... 3
2 ECO 222 Macroeconomics ........................ 3
3 ATG 157 Accounting-Financial .................... 3
4 ATG 158 Accounting-Managerial .................. 3
5 BMA 352 Business Management ................... 3
6 Business Electives .................................. 9

24

Group IV — Construction Science
C/CON 124 Emerging Technologies in CEC .......... 2
CON 132 Construction Graphics ....................... 2
CON 262 Mechanical and Electrical Systems .......... 3
CON 270 Materials and Methods of Construction .... 3
CON 487 Steel and Concrete ........................ 3
CON 489 Alternate Materials .......................... 3
CE 150 or IMT 222 Statics ............................ 3
CE 206 Surveying ...................................... 2
CE 301 or IMT 324 Strength of Materials .......... 3, 4
CE 320 Introductory Soil Mechanics .................. 3
CON 224 CADD in Construction ....................... 3

30-31

Group V — Construction Management
CON 100 Introduction to Construction ............... 1
CON 342 Construction Equipment and Methods ...... 3
CON 356 Construction Industry Safety Practices .... 3
CON 372 Construction Methods Improvement ......... 3
CON 392 Construction Management .................. 3
CON 396 Construction Estimating ..................... 3
CON 492 Construction Contracts ...................... 2
CON 498 Senior Project ............................... 3
CON Electives .......................................... 9

30

Elective (Group 4 or 5) ................................ 3

Minimum semester hours required for BSC Degree 126

Typical Curriculum

Freshman Year
First Semester
CON 100 Introduction to Construction ............... 1
CON 103 Oral Communication Process ............... 3
MTH 115 or MTH 121 Calculus I ....................... 4
1 Gen. Ed.uc. — Western Civilization ............... 3
GES 101 Principles of Earth Science ................. 3
GES 102 Principles of Earth Science Lab ........... 1

15

Second Semester
CON 132 Construction Graphics ...................... 2
ENG 101 English Composition ........................ 3
MTH 116 or MTH 122 Calculus II ...................... 4
1 Gen. Ed uc. — Western Civilization ............... 3
PHY 107 or Physics 110 ................................ 4
4 CS Elective .......................................... 3

15-16

Sophomore Year
First Semester
CE 150 Mechanics I or IMT 222 Statics ............... 3
ECO 221 Microeconomics ............................. 3
ATG 157 Accounting-Financial ....................... 3
CON 270 Materials and Methods of Construction .... 3
CE 206 Surveying ...................................... 2
CON 224 CADD in Construction ....................... 3

17

See Gen. Ed list in the Schedule of Classes each semester.
2 Electives must be chosen from list available from the academic advisor.
Second Semester
CE 301 or IMT 324 Strength of Materials ..........3, 4
ECO 222 Macroeconomics..........................3
ATG 158 Accounting-Managerial ......................3
CON 262 Mechanical & Electrical Systems for Bldgs. ....3
CE/CON 124 Emerging Technologies .................2
1Gen. Ed. — Human Values ..........................3

17-18

Junior Year
First Semester
1 ENG 300, 301, 304, 305, or 306 Adv. Writing...........3
1 CON 342 Construction Equipment and Methods ..........3
1 CON 372 Construction Methods Improvement ..........3
2 Management Elective ..................................3
2 Construction Elective..................................3

15

Second Semester
CON 356 Construction Safety ..........................3
CON 392 Construction Management .....................3
BMA 352 Business Management ........................3
CON 396 Construction Estimating .......................3
CE 320 Intro. to Soil Mechanics ........................3

15

Senior Year
First Semester
1 Gen. Ed. — Fine Arts ....................................3
1 CON 487 Steel and Concrete Structures .................3
1 CON 492 Construction Contracts ........................3
2 Construction or Construction Science Elective ...........3
2 Management Elective ..................................3
1 Gen. Ed. Non-Western Civilization ......................3

17

Second Semester
CON 498 Senior Project ....................................3
CON 489 Alternative Material Structures ................3
2 Construction Elective ..................................3
2 Construction Elective ..................................3
2 Management Elective ..................................3

15

Total Hours 126-128

Course Descriptions

CON 100 Introduction to Construction 1 hr.
Introduction to the construction profession. Computer applications, problem solving concepts, design concepts and visualization, industry ethics, professional societies, and university services

CON 124 Emerging Technologies in CEC 2 hrs.
Examination of emerging computer technologies and their relevancy to Civil Engineering and Construction. Introduction to common software including spreadsheet, word processing, databases, graphics and presentation. Exposure to multimedia tools such as text, image, sound video and animation. Introduction to E-mail and Web Page development. Cross-listed as CE 124.

CON 132 Construction Graphics 2 hrs.
Symbols, conventions, and details of construction drawings. Emphasis on interpretation and communication of requirements of contract drawings. Prerequisite: one unit of high school or college technical drafting or consent of instructor.

CON 200 Engineering Co-op 0 hrs.
Full-time cooperative education assignment for construction students who alternate periods of full-time school with periods of full-time academic or career-related work in industry. Satisfactory/Unsatisfactory. Prerequisites: Sophomore standing in the College of Engineering and Technology, 2.0 overall grade point average at Bradley, approval of engineering and technology Co-op coordinator and Co-op faculty advisor.

CON 224 CADD in Construction 3 hrs.
Examination of the graphical capabilities of current computer aided design and drafting (CADD) systems. Theoretical and hands-on applications of the most widely used CADD systems available for construction applications. Cross-listed as CE 224.

CON 262 Mechanical and Electrical Systems for Buildings 3 hrs.
Survey of basic principles, methods, and equipment for building component systems related to human health and comfort. Introduces psychrometric chart, building heating systems, electrical systems, plumbing. Prerequisites: PHY 107 or 110; CON 132.

CON 270 Materials & Methods of Construction 3 hrs.
Characteristics and use of basic construction materials; introduction to materials specifications.

CON 272 Materials & Methods of Construction II 3 hrs.
A study of materials and techniques of construction used in structural frames of wood, steel, and concrete; consideration of foundation, asphalt, and advanced interior construction methods. Prerequisite: CON 270

CON 330 Housing 3 hrs.
Planning residential areas: geographic location, orientation, functions, and interrelationships of functions. Fundamentals of residential design which can result in quality living environments for all income levels. Prerequisite: junior standing.

CON 342 Construction Equipment and Methods 3 hrs.
Characteristics of contractor plant and construction equipment; methods for their efficient use. Prerequisite: junior standing in College of Engineering and Technology.

CON 352 Urban Environment 3 hrs.
Principles of land utilization and other elements related to planning and developing quality urban environments. Prerequisite: junior standing.

Design of a safety program, risk analysis of a company’s home office and field safety performance characteristics, potential problems, contingency planning, and safety audit analysis. Prerequisites: CON 270

CON 368 Advanced Environmental Technologies 3 hrs.
Survey of large scale integrated building component systems related to human health and comfort. Topics include lighting, electrical design and layout, vertical transportation, alarm and security systems, fire protection, total space conditioning, water treatment and sewage treatment, industrial piping design. Prerequisite: CON 262.
CON 372  Construction Methods Improvement  3 hrs.
Principles and methods for selection and installation of
materials assemblies used in construction; industrialized
and systems building; methods improvements.
Prerequisite: CON 270.

CON 390  Microcomputers in Construction  3 hrs.
Applications of microcomputers in the construction
industry, Prerequisite: junior standing in College of
Engineering and Technology.

CON 392  Construction Scheduling  3 hrs.
Economic considerations and tools of management: cost
reporting; scheduling, Emphasis on network methods of
scheduling; resource allocation and least-cost expediting.
Computer aided. Prerequisite: junior standing in College
of Engineering and Technology.

CON 394  Construction Labor and Unions  3 hrs.
Union and non-union activities in construction industry:
analysis, organizing, bargaining, contract language,
jurisdictional disputes, training, and restrictions on
operating non-union. Prerequisite: junior standing.

CON 395  Construction Claims & Change Orders  3 hrs.
Record keeping and quantitative skill necessary for
change orders and claims presentation or preparation.
Prerequisite: junior standing in College of Engineering
and Technology.

CON 396  Construction Estimating  3 hrs.
Material, equipment, and labor estimates of construction
projects. Includes laboratory. Prerequisites: Junior
standing in College of Engineering and Technology.

CON 409  Special Topics  1-4 hrs.
Supervised individual study of special construction topics.
Prerequisite: consent of department chair.

CON 487  Steel and Concrete Structures  3 hrs.
Introduction to structural analysis and design of steel and
reinforced concrete members; application to construction
problems. Prerequisites: MTH 116 or 122; CE 301 or IMT
324.

CON 489  Alternate Materials Structures  3 hrs.
Introduction to structural analysis and design of
timber and other structural materials such as masonry.
Application to industry problems in bracing, formwork,
and temporary excavation supports. Prerequisites: MTH
116 or 122; CE 301 or IMT 324.

CON 492  Construction Contracts  2 hrs.
Project manual concept; emphasis on Uniform System
for Construction Specifications, general conditions of
construction contracts, bidding requirements, and role of
inspection in construction operations. Prerequisite: senior
standing in College of Engineering and Technology.

CON 494  Advanced Construction Practices  3 hrs.
Construction ethics; responsibilities and professionalism;
advanced areas of business practices in construction.
Prerequisites: CON 392, 492; or consent of instructor.

CON 498  Senior Project  3 hrs.
Application of construction principles to industry
projects. Prerequisites: senior standing in construction;
consent of Department Chair.
